# Meet the MAX Series

MEC's MAX Series Boom Lifts are designed to tackle the challenges of today's elevated work environments. Engineered for height, reach, and precise positioning—and the rugged durability crews rely on—they're ideal for navigating structural obstacles and working within complex builds. MAX Series Booms deliver what operators need: full-featured safety, smooth control, and dependable performance, job after job.

# Built for the Most Demanding Work

When the jobsite pushes the limits, MAX Series Boom Lifts are ready. From uneven terrain to tight access and complex structures, the MAX Series delivers the precision, stability, and reliability crews need to stay on task and on schedule.

Every feature is purpose-built for real-world challenges, combining innovative safety systems and intuitive control to keep productivity high and operators confident at height.

# MAX Series Design Features

- Standard multi-directional, high-capacity jib with 135° vertical and 120° horizontal rotation
- Multiple steering modes: 4-Wheel Steer, Crab Steer, 2-Wheel Steer
- Dual capacity 900 lb (408 kg) restricted, 600 lb (272 kg) unrestricted
- 4-Wheel drive with diff-lock
- Active envelope management system for boom control
- 90" x 40" platform with one gate and two slide bar entries
- Tilt sensor with drive and elevate cutout
- Foam-filled, rough terrain tires
- Proportional drive
- Platform load sense system
- AC power to platform

## MAX Performance:

The MAX Series offers the maneuverability and power to get around and through congested and rough jobsites. Multiple steering modes, high-horsepower diesel engines, 4-wheel-drive and traction control help navigate the most challenging sites.

## MAX Versatility:

With the multi-directional rotating jib, impressive platform configuration capabilities, and plenty of outreach, the MAX Series is the better solution for working in and around obstacles at height with significantly less machine repositioning, boosting efficiency where it counts. This reach versatility combined with load sensing, tilt monitoring, and envelope management helps crews operate confidently and maintain productivity in challenging access situations.

## MAX Control:

When precision matters, MAX delivers. Responsive, proportional controls coupled with a robust, solid platform and boom enable workers to position smoothly and confidently. An intuitive control layout that does not require a footswitch helps operators stand where they want, keeping them in command for positioning and driving visibility and comfort. Every movement feels deliberate. Every work point is within reach.
